

UL's Lightning Protection Certificate Services

Insurance Industry (casualty and risk providers)

UL is dedicated to working collaboratively with the insurance industry to minimize damage and subsequent claims related to lightning strikes. UL is the only independent third party OSHA accredited nationally recognized testing agency offering Master Label® certificate inspections for lightning protection systems. When a lightning protection system bears a Master Label® certificate, the end user is assured that the system is installed in compliance with a nationally recognized standard.

Service overview

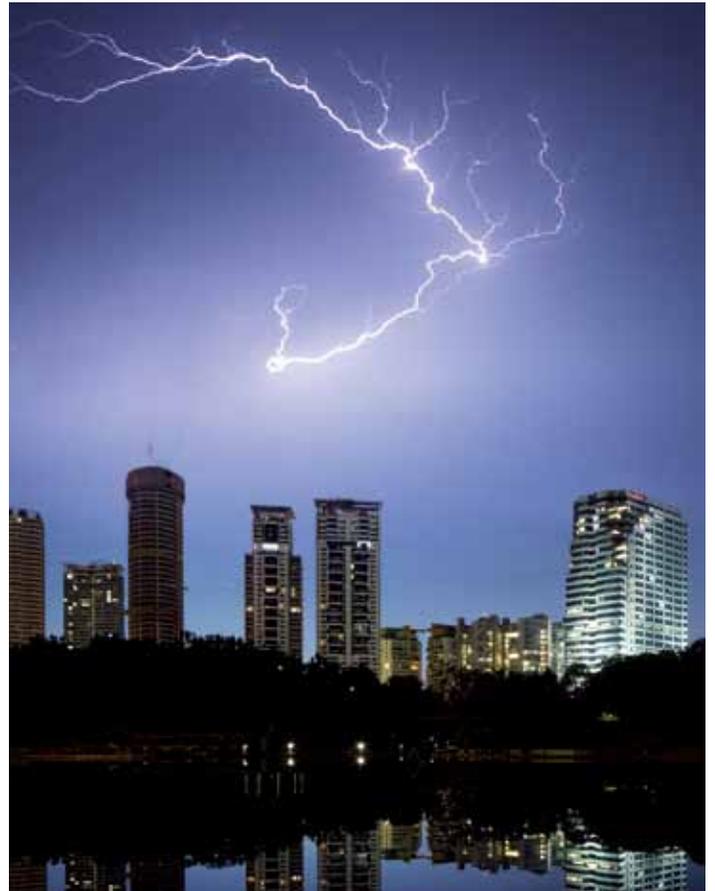

A Master Label® certificate is evidence that a lightning protection system installation was found by inspection to be compliant with the applicable standards such as UL 96A, NFPA 780, IEC 62305, AS/NZS 1768 or other published standards for lightning protection systems. Master Label® certificates identify the location of the insured property, the name of the lightning protection installer, inspection date, expiration date, and any other relevant details of an inspected system. Each structure is evaluated for compliance independent of the surrounding objects and structures. Certificates are valid unless:

- Modifications/additions are made to the structure or system
- Damage to the system has occurred
- Certificate expires
- Modifications/additions are made to the structure or system
- Damage to the system has occurred
- Certificate expires

Active certificates may be accessed at <https://lps.ul.com>

General

The lightning protection industry is, in many respects, a subset of the building industry that serves residential, commercial, industrial, and military structures. The industry addresses the common need to limit the hazardous and damaging effects of a lightning strike.

Master Label® certificate

Master Label® certificate: Issued for those structures that fully comply with a recognized standard. UL retains ownership of the Master Label® certificate. This certificate is valid for the time period identified on the certificate based on UL's reasonable estimate that a system will remain unchanged during that time period.
